

Cash vs. Future Test Cases Check List

Case I - Buy Cash :: Sell Future with first order base option as Buy / Cash Based

Sub case 1: Conditions must be checked pre-submission of counter cash buy order if orders lot is 1

Remaining quantity – Should be greater than zero

Sub case 2: Conditions must be checked pre-submission of counter cash buy order if orders lot is more than 1

Remaining quantity – Should be greater than zero

Depth Upto & Threshold quantity – Availability of set order lots

Sub case 3: Fresh counter cash order parameters

Order Quantity – Set order lots considering the remaining quantity

Order Price – Current Future Best Bid minus difference set

Disclosed quantity – Set % of disclosed quantity

Sub case 4: Counter cash order pending with only single lot

Modified cash order price = Current Future Best Bid minus difference set

Sub case 5: Counter cash order pending with multiple lots (threshold quantity is not available on futures side)

Depth Upto

Threshold quantity

Modify the pending order as per sub case 2. If the total futures bid size is zero, then pending order will be cancelled.

Sub case 6: Counter cash order partially traded and absolute quantity % not satisfied with single / multiple order lot till set time interval

Time interval

Order lot should be 1.

Absolute quantity < Traded quantity

Cancel the pending cash buy order & Place cash sell order with below parameters

Order quantity of reverse cash order = traded quantity of cash bought

Order price = zero (market order)

Sub case 7: Counter cash order partially traded and absolute quantity % satisfied with single order lot till set time interval

Against future sell order will be generated. Go to sub case 10 / 11.
Modify the pending cash order price as zero (market order)

Sub case 8: Counter cash order partially traded and absolute quantity % satisfied with multiple order lots till set time interval

Time interval
Order lot should be more than 1.
Absolute quantity < Traded quantity

Modify the pending cash buy order and submit the against future sell order with below parameters

Order quantity of counter cash order = Round off to nearest lot size on higher side
Order price of counter cash order = zero (market order)

If the counter order is partially traded to the extent of multiple of lot size, then against order will be placed for the traded quantity of counter order. The pending counter order will be in same condition till there is any partial execution.

For against future sell order parameters go to sub case 10 / 11.

Sub case 9: Counter cash order fully traded

Against future sell order will be generated. Go to sub case 10 / 11.

Sub case 10: Against future sell order parameters (if Second order actual difference is checked)

Order quantity of against future sell order = Traded quantity of counter cash
Order price of against future sell order = Avg. trade price of cash order executed + Set difference

Sub case 11: Against future sell order parameters (if Second order actual difference is not checked)

Order quantity of against future sell order = Traded quantity of counter cash
Order price of against future sell order = Order price of cash order executed + Set difference

Sub case 12: Against future order pending / partially traded if Market Order Upto is zero

Time interval

No. of Best Bid/Ask modifications
Market Order Upto = zero

Modified pending against future order price = Best ask price
After the set no. of modifications completed, the pending future sell order price will be modified to zero (market order).

Sub case 13: Against future order pending / partially traded if Market Order Upto is not zero

Time interval
No. of Best Bid/Ask modifications
Market Order Upto = not zero

Modified pending against future order price = Best ask price
After the set no. of modifications completed, the pending future sell order price will be

((Pending future sell order price) – (Market order upto value))

If this order doesn't get fully traded, same needs to be closed with manual intervention.

Sub case 14: Against future order fully traded, if remaining quantity is zero

Stop quoting any fresh orders

Sub case 15: Against future order fully traded, if remaining quantity is greater than zero

Go to Sub case 1.

Case II - Buy Cash :: Sell Future with first order base option as Sell

Sub case 1: Conditions must be checked pre-submission of counter future sell order

Remaining quantity – Should be greater than zero

Depth Upto & Threshold quantity – Availability of set order lots

Sub case 2: Fresh counter future order parameters

Order Quantity – Set order lots considering the remaining quantity

Order Price – Current Cash Best Ask plus difference set

Sub case 3: Counter future order pending with only single lot

Modified future order price = Current Cash Best Ask plus difference set

Sub case 4: Counter future order pending with single / multiple lots (threshold quantity is not available on cash side)

Depth Upto

Threshold quantity

Modify the pending order as per sub case 2.

Sub case 5: Counter future order partially traded with multiple order lots till set time interval

Time interval

Order lot should be more than 1.

If the counter order is partially traded to the extent of multiple of lot size, then against order will be placed for the traded quantity of counter order. The pending counter order will be in same condition till there is any partial execution.

Sub case 6: Counter future order fully traded

Against cash buy order must be generated. Go to sub case 7 / 8.

Sub case 7: Against cash buy order parameters (if Second order actual difference is checked)

Order quantity of against cash buy order = Traded quantity of counter future

Order price of against cash buy order = Avg. trade price of future order executed – Set difference

Sub case 8: Against cash buy order parameters (if Second order actual difference is not checked)

Order quantity of against cash buy order = Traded quantity of counter future
Order price of against cash buy order = Order price of future order executed – Set difference

Sub case 9: Against cash order pending / partially traded if Market Order Upto is zero

Time interval
No. of Best Bid/Ask modifications
Market Order Upto = zero

Modified pending against cash buy order price = Best bid price
After the set no. of modifications completed, the pending cash buy order price will be modified to zero (market order).

Sub case 10: Against cash order pending / partially traded if Market Order Upto is not zero

Time interval
No. of Best Bid/Ask modifications
Market Order Upto = not zero

Modified pending against cash buy order price = Best bid price
After the set no. of modifications completed, the pending cash buy order price will be

((Pending cash buy order price) + (Market order upto value))

If this order doesn't get fully traded, same needs to be closed with manual intervention.

Sub case 11: Against cash order fully traded, if remaining quantity is zero

Stop quoting any fresh orders

Sub case 12: Against cash order fully traded, if remaining quantity is greater than zero

Go to Sub case 1.

Case III - Sell Cash :: Buy Future with first order base option as Sell / Cash Based

Sub case 1: Conditions must be checked pre-submission of counter cash sell order if orders lot is 1

Remaining quantity – Should be greater than zero

Sub case 2: Conditions must be checked pre-submission of counter cash sell order if orders lot is more than 1

Remaining quantity – Should be greater than zero

Depth Upto & Threshold quantity – Availability of set order lots

Sub case 3: Fresh counter cash order parameters

Order Quantity – Set order lots considering the remaining quantity

Order Price – Current Future Best Ask plus difference set

Disclosed quantity – Set % of disclosed quantity

Sub case 4: Counter cash order pending with only single lot

Modified cash order price = Current Future Best Ask plus difference set

Sub case 5: Counter cash order pending with multiple lots (threshold quantity is not available on futures side)

Depth Upto

Threshold quantity

Modify the pending order as per sub case 2.

Sub case 6: Counter cash order partially traded and absolute quantity % not satisfied with single / multiple order lot till set time interval

Time interval

Order lot should be 1.

Absolute quantity < Traded quantity

Cancel the pending cash sell order & Place cash buy order with below parameters

Order quantity of reverse cash order = traded quantity of cash sold

Order price = zero (market order)

Sub case 7: Counter cash order partially traded and absolute quantity % satisfied with single order lot till set time interval

Against future buy order will be generated. Go to sub case 10 / 11.

Modify the pending cash order price as zero (market order)

Sub case 8: Counter cash order partially traded and absolute quantity % satisfied with multiple order lots till set time interval

Time interval

Order lot should be more than 1.

Absolute quantity < Traded quantity

Modify the pending cash sell order and submit the against future buy order with below parameters

Order quantity of counter cash order = Round off to nearest lot size on higher side

Order price of counter cash order = zero (market order)

If the counter order is partially traded to the extent of multiple of lot size, then against order will be placed for the traded quantity of counter order. The pending counter order will be in same condition till there is any partial execution.

For against future buy order parameters go to sub case 10 / 11.

Sub case 9: Counter cash order fully traded

Against future buy order will be generated. Go to sub case 10 / 11.

Sub case 10: Against future buy order parameters (if Second order actual difference is checked)

Order quantity of against future buy order = Traded quantity of counter cash

Order price of against future buy order = Avg. trade price of cash order executed – Set difference

Sub case 11: Against future buy order parameters (if Second order actual difference is not checked)

Order quantity of against future buy order = Traded quantity of counter cash

Order price of against future buy order = Order price of cash order executed – Set difference

Sub case 12: Against future order pending / partially traded if Market Order Upto is zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = zero

Modified pending against future order price = Best bid price

After the set no. of modifications completed, the pending future buy order price will be modified to zero (market order).

Sub case 13: Against future order pending / partially traded if Market Order Upto is not zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = not zero

Modified pending against future order price = Best bid price

After the set no. of modifications completed, the pending future buy order price will be

$((\text{Pending future buy order price}) + (\text{Market order upto value}))$

If this order doesn't get fully traded, same needs to be closed with manual intervention.

Sub case 14: Against future order fully traded, if remaining quantity is zero

Stop quoting any fresh orders

Sub case 15: Against future order fully traded, if remaining quantity is greater than zero

Go to Sub case 1.

Case IV - Sell Cash :: Buy Future with first order base option as Buy

Sub case 1: Conditions must be checked pre-submission of counter future buy order

Remaining quantity – Should be greater than zero

Depth Upto & Threshold quantity – Availability of set order lots

Sub case 2: Fresh counter future order parameters

Order Quantity – Set order lots considering the remaining quantity

Order Price – Current Cash Best Bid minus difference set

Sub case 3: Counter future order pending with only single lot

Modified future order price = Current Cash Best Bid minus difference set

Sub case 4: Counter future order pending with single / multiple lots (threshold quantity is not available on cash side)

Depth Upto

Threshold quantity

Modify the pending order as per sub case 2.

Sub case 5: Counter future order partially traded with multiple order lots till set time interval

Time interval

Order lot should be more than 1.

Place cash sell order for the traded quantity of cash with parameters as in sub case 7 / 8.

If the counter order is partially traded to the extent of multiple of lot size, then against order will be placed for the traded quantity of counter order. The pending counter order will be in same condition till there is any partial execution.

Sub case 6: Counter future order fully traded

Against cash sell order must be generated. Go to sub case 7 / 8.

Sub case 7: Against cash sell order parameters (if Second order actual difference is checked)

Order quantity of against cash sell order = Traded quantity of counter future

Order price of against cash sell order = Avg. trade price of future order executed + Set difference

Sub case 8: Against cash sell order parameters (if Second order actual difference is not checked)

Order quantity of against cash sell order = Traded quantity of counter future

Order price of against cash sell order = Order price of future order executed + Set difference

Sub case 9: Against cash order pending / partially traded if Market Order Upto is zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = zero

Modified pending against cash sell order price = Best ask price

After the set no. of modifications completed, the pending cash sell order price will be modified to zero (market order).

Sub case 10: Against cash order pending / partially traded if Market Order Upto is not zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = not zero

Modified pending against cash sell order price = Best ask price

After the set no. of modifications completed, the pending cash sell order price will be

((Pending cash sell order price) – (Market order upto value))

If this order doesn't get fully traded, same needs to be closed with manual intervention.

Sub case 11: Against cash order fully traded, if remaining quantity is zero

Stop quoting any fresh orders

Sub case 12: Against cash order fully traded, if remaining quantity is greater than zero

Go to Sub case 1.
