INDEX

- I. Login*
- II. Input Parameters*
- III. Controlling Buttons*
- IV. Execution Logic*
- V. Order and Trade Book*
- VI. Net Position*

Future vs. Future arbitrage quote model is used for rollover of future positions across different expiries for any derivative counter. The advantage of quote model is to reach the more accurate spread expected and faster execution in capturing the opportunity.

I. Login:

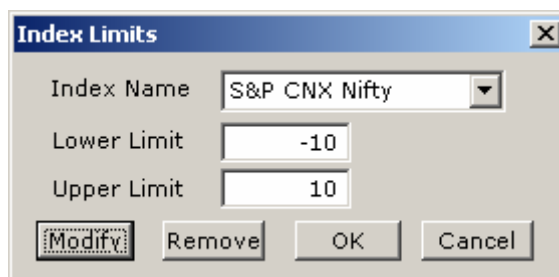

The user needs to login through GETS CTCL client, after which he will get the access of future vs. future quote model from arbitrage menu as shown below.

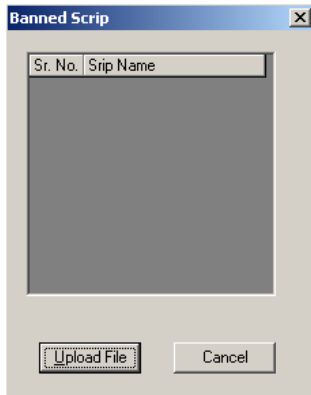

If the user enters wrong password for more than 3 times, his login will be blocked. To unblock, he has to request the system administrator.

During the login sequence to Future vs. future arbitrage quote model, following checks must be defined, which will be validated in the post-login and execution.

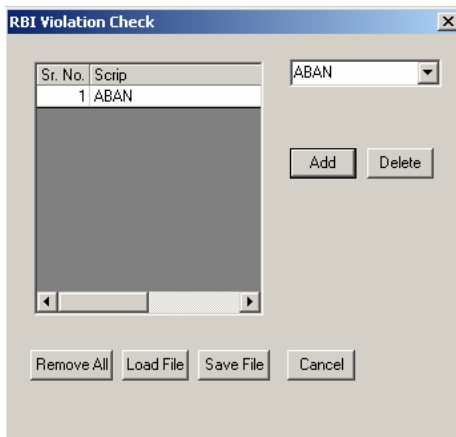

Index Limits Check – When index crosses the set volatility range, then automated arbitrage will be stopped. Need to define the index and volatility range.

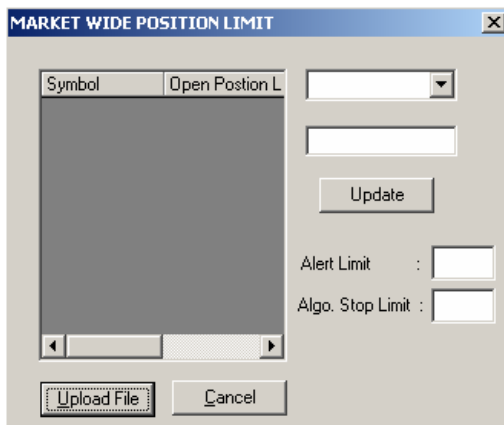

Banned Scrip Check – Trading in any banned scrip can be ruled out by uploading the banned scrip list. All violated symbols won't be loaded in the arbitrage settings form.

RBI Violation Check – Trading in any RBI violated scrip can be ruled out by uploading RBI violation list. All violated symbols won't be loaded in the arbitrage settings form.

Market Wide Position Limit Check – Trading in contracts, where market wide position limit reached, will be ruled out by uploading the market wide position limit list. All violated symbols won't be loaded in the arbitrage settings form.

II. Input parameters:

After successful login, the user will be prompted with the future to future limit settings dialog as shown below. He can call the dialog from market watch using short key CTRL+SHIFT+Q.

Exchange	Symbol	PRO / CLI	Account ID	Participant ID	Near Expiry	Far Expiry	Lot Size
NSE	NIFTY	CLI	0H01	CITIMLCMESS	27AUG2009	24SEP2009	50

Buy Near(27AUG2009)::Sell Far(24SEP2009)	Price Diff	Order Qty	Total Qty	Traded Qty	Remaining Qty
☒	10 To 10	1	10		

Buy Far(24SEP2009)::Sell Near(27AUG2009)	Price Diff	Order Qty	Total Qty	Traded Qty	Remaining Qty
☐		1	1		

Pending Order	Depth Upto	Best Ask/Bid	Times	Time	Mkt Ord Upto	Thresh. Qty
	3	2	3	3	0	%

Symbol	ProClient	Account Id	Participant Id	Buy Expiry	Sell Expiry	Lower Limit	Upper Limit	Ord Qty	Total Qty	Lotsize	Traded Qty	Rem Qty
NIFTY	CLI	0H01	CITIMLCMESS	27AUG2009	24SEP2009	10.00	10.00	50	500	50	0	0

All input parameters are explained below.

1. Exchange: NSE
2. Symbol: Derivative symbols listed on NSE
3. PRO/CLI: Choose for proprietary trading / client trading
4. Account ID: Select the client account ID
5. Participant ID: NSE participant ID, in case of institutional client
6. Near Expiry: Derivative near expiry date
7. Far Expiry: Derivative far expiry date
8. Lot Size: Lot size of the symbol will be selected automatically

Settings for Buy Near & Sell Far (Short Roll): Check Buy Near :: Sell Far

9. Price Diff: Input required absolute spread range
10. Order Qty: Input the no. of lots that has to be placed for each order
11. Total Qty: Input the total no. of lots to execute
12. Trd Qty: Displays the traded quantity for selected symbol
13. Remaining Qty: Displays the remaining quantity for selected symbol

Settings for Buy Far & Sell Near (Long Roll): Check Buy Far :: Sell Near

- 14. Price Diff: Input required absolute spread range
- 15. Order Qty: Input the no. of lots that has to be placed for each order
- 16. Total Qty: Input the total no. of lots to execute
- 17. Trd Qty: Displays the traded quantity for selected symbol
- 18. Remaining Qty: Displays the remaining quantity for selected symbol

First Order Base Settings

- 19. First Order: Options – Buy / Sell – Select any one of these

Buy – On selecting this option, after buy order gets fully traded, sell order will be sent to exchange.

Sell – On selecting this option, after sell order gets fully traded, buy order will be sent to exchange.

- 20. Direction: Options – All Buy / All Sell / Default – Select any one of these

In this condition, if All Buy / All Sell option is selected, then this option will precede the condition selected in 19th point, irrespective of short roll / long roll. If selected default, the execution will be done as per settings in 19th point. This condition applies across symbols being input for short roll / long roll.

All Buy – On selecting this option, after buy order gets fully traded, sell order will be sent to exchange.

All Sell – On selecting this option, after sell order gets fully traded, buy order will be sent to exchange.

Default – On selecting this option, execution will be done as per selection in 19th point.

Pending Order related settings

21. Depth Upto – Input the market picture depth size consideration for weighted average price calculation. Value should be in the range of 1 to 5.

22. Best Ask/Bid – Input the no. of modifications allowed. If the against order is pending, then it will be modified for the no. of times mentioned in this text box.

23. Time – Input the time interval to modify the pending against order.

24. Mkt Ord Upto – Input the maximum price tick by which the pending order price will be modified. If this is defined as zero, pending order will be modified as market order.

Remaining quantity – should be more than zero and
Depth upto – Total future far expiry bid quantity, considering the set market depth upto level.

And the order parameters will be as follows.

Order Quantity – Lots available in market depth based on set order lots considering the remaining quantity

Order Price – Current Future far expiry Best Bid minus difference set

Counter buy near expiry order cases

Counter near expiry order is pending:

Conditions checked: Difference set, Market Depth Upto

For every tick change in the future far expiry best bid price, the price of pending future near expiry buy order will be modified, considering the set difference.

In case of multiple lots, if the pending order quantity not available in the market depth on futures far bid side, then the pending near expiry order will be modified based on availability of lots on total future far expiry market depth.

Modified near expiry order price - Current Future far Best Bid minus difference set

Counter near expiry order is partially traded (Multiple order lots):

If the counter order gets partially traded, then remaining buy near quantity is cancelled and sell far order is placed with near side traded quantity as order quantity.

Counter near expiry order is fully traded:

Far expiry sell order will be generated considering the below parameters.

Order Quantity – traded quantity counter buy near order

Order Price – Order price of near order executed + Set difference

Against Sell Future Far Expiry Order Cases

Against future far sell order is pending / partially traded:

Conditions checked: Best Bid/Ask modifications, Market Order Upto, Time interval

Pending future far sell order will be modified to best bid price for the no. of best bid/ask modifications mentioned after the set time interval. If the order is pending even after the no. of modifications, then the pending future far order will be modified as below.

If Market Order Upto value is zero - modify the pending future far order as market order.
If Market Order Upto value is other than zero - modify the pending future far sell order price by subtracting the set market order upto value from pending order price. If this order doesn't get fully traded, same needs to be closed with manual intervention.

Against future far sell order is fully traded:

Order cycle completed. If remaining quantity more than zero, Case I will be repeated.

Case II: Buy Near :: Sell Far with first order base option as Sell Far

After filling the input parameters, when the user call the Start control button, first sell far expiry counter order will be placed on satisfying the below conditions.

In case of single order lot,

Remaining quantity – should be more than zero

In case of multiple order lots,

Remaining quantity – should be more than zero and

Depth upto – Total future near expiry ask quantity, considering the set market depth upto level.

And the order parameters will be as follows.

Order Quantity – Lots available in market depth based on set order lots considering the remaining quantity

Order Price – Current Future near expiry Best Ask plus difference set

Counter sell far expiry order cases

Counter sell far expiry order is pending:

Conditions checked: Difference set, Market Depth Upto

For every tick change in the near expiry best ask price, the price of pending future far expiry sell order will be modified, considering the set difference.

In case of multiple lots, if the pending order quantity not available in the market depth on futures near Ask side, then the pending far expiry order will be modified based on availability of lots on total future near expiry market depth.

Modified far expiry order price - Current Future near Best Ask plus difference set

Counter far expiry order is partially traded (Multiple order lots):

If the counter order gets partially traded, then remaining sell far quantity is cancelled and buy near order is placed with far side traded quantity as order quantity.

Counter far expiry order is fully traded:

Near expiry buy order will be generated considering the below parameters.

Order Quantity – traded quantity counter sell far order

Order Price – Order price of far order executed – Set difference

Against Buy Near Future Expiry Order Cases

Against near future buy order is pending / partially traded:

Conditions checked: Best Bid/Ask modifications, Market Order Upto, Time interval

Pending near future buy order will be modified to best ask price for the no. of best bid/ask modifications mentioned after the set time interval. If the order is pending even after the no. of modifications, then the pending future near order will be modified as below.

If Market Order Upto value is zero - modify the pending near future order as market order.

If Market Order Upto value is other than zero - modify the pending near future buy order price by adding the set market order upto value from pending order price. If this order doesn't get fully traded, same needs to be closed with manual intervention.

Against near future buy order is fully traded:

Order cycle completed. If remaining quantity more than zero, Case II will be repeated.

Case III: Buy Far :: Sell Near with first order base option as Buy Far

After filling the input parameters, when the user call the Start control button, first buy far expiry counter order will be placed on satisfying the below conditions.

In case of single order lot,

Remaining quantity – should be more than zero

In case of multiple order lots,

Remaining quantity – should be more than zero and

Depth upto – Total future near expiry bid quantity, considering the set market depth upto level.

And the order parameters will be as follows.

Order Quantity – Lots available in market depth based on set order lots considering the remaining quantity

Order Price – Current Future near expiry Best Bid minus difference set

Counter buy far expiry order cases

Counter far expiry order is pending:

Conditions checked: Difference set, Market Depth Upto

For every tick change in the future near expiry best bid price, the price of pending future far expiry buy order will be modified, considering the set difference.

In case of multiple lots, if the pending order quantity not available in the market depth on futures near bid side, then the pending far expiry order will be modified based on availability of lots on total future near expiry market depth.

Modified far expiry order price - Current Future near Best Bid minus difference set

Counter far expiry order is partially traded (Multiple order lots):

If the counter order gets partially traded, then remaining buy far quantity is cancelled and sell near order is placed with far side traded quantity as order quantity.

Counter far expiry order is fully traded:

Near expiry sell order will be generated considering the below parameters.

Order Quantity – traded quantity counter buy far order

Order Price – Order price of far order executed + Set difference

Against Sell Near Future Expiry Order Cases

Against near future sell order is pending / partially traded:

Conditions checked: Best Bid/Ask modifications, Market Order Upto, Time interval

Pending future near sell order will be modified to best bid price for the no. of best bid/ask modifications mentioned after the set time interval. If the order is pending even after the no. of modifications, then the pending future near order will be modified as below.

If Market Order Upto value is zero - modify the pending future near order as market order.

If Market Order Upto value is other than zero - modify the pending future near sell order price by subtracting the set market order upto value from pending order price. If this order doesn't get fully traded, same needs to be closed with manual intervention.

Against sell near future order is fully traded:

Order cycle completed. If remaining quantity more than zero, Case III will be repeated.

Case IV: Buy Far :: Sell Near with first order base option as Sell Near

After filling the input parameters, when the user call the Start control button, first sell near expiry counter order will be placed on satisfying the below conditions.

In case of single order lot,

Remaining quantity – should be more than zero

In case of multiple order lots,

Remaining quantity – should be more than zero and

Depth upto – Total future far expiry ask quantity, considering the set market depth upto level.

And the order parameters will be as follows.

Order Quantity – Lots available in market depth based on set order lots considering the remaining quantity

Order Price – Current Future Far expiry Best Ask plus difference set

Counter sell near expiry order cases

Counter sell near expiry order is pending:

Conditions checked: Difference set, Market Depth Upto

For every tick change in the far expiry best ask price, the price of pending future near expiry sell order will be modified, considering the set difference.

In case of multiple lots, if the pending order quantity not available in the market depth on futures Far Ask side, then the pending near expiry order will be modified based on availability of lots on total future far expiry market depth.

Modified near expiry order price - Current Future far Best Ask plus difference set

Counter near expiry order is partially traded (Multiple order lots):

If the counter order gets partially traded, then remaining sell near quantity is cancelled and buy far order is placed with near side traded quantity as order quantity.

Counter near expiry order is fully traded:

Far expiry buy order will be generated considering the below parameters.

Order Quantity – traded quantity counter sell near order
Order Price – Order price of near order executed – Set difference

Against Buy Far Future Expiry Order Cases
