Time interval

No. of Best Bid/Ask modifications

Market Order Upto = zero

Modified pending against future far order price = Best bid price of far

After the set no. of modifications completed, the pending future far sell order price will be modified to zero (market order).

Sub case 10: Against future far sell order pending / partially traded if Market Order Upto is not zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = not zero

Modified pending against future far order price = Best bid price of far

After the set no. of modifications completed, the pending future far sell order price will be

((Pending future far sell order price) – (Market order upto value))

Sub case 11: Against future far sell order fully traded, if remaining quantity is zero

Stop quoting any fresh orders

Sub case 12: Against future far sell order fully traded, if remaining quantity is greater than zero

Go to Sub case 1.

Case II - Buy Near :: Sell Far with first order base option as Sell Far

Sub case 1: Conditions must be checked pre-submission of counter sell far future order if orders lot is 1

Remaining quantity – Should be greater than zero

Sub case 2: Conditions must be checked pre-submission of counter sell far future order if orders lot is more than 1

Remaining quantity – Should be greater than zero

Market Depth Upto – Availability of set order lots in near ask market depth

Sub case 3: Fresh counter sell far order parameters

Order Quantity – Set order lots considering the remaining quantity

Order Price – Current Future near expiry Best Ask minus difference set

Sub case 4: Counter sell far order pending with only single lot

Modified far expiry order price - Current Future near Best Ask plus difference set

Sub case 5: Counter sell far order pending with multiple lots (threshold quantity is not available on near side)

Market Depth Upto

Modify the pending sell far order as per sub case 2.

Sub case 6: Counter sell far order partially traded with multiple order lots

Order lot should be more than 1.

Cancel the pending sell far order and submit the against future near buy order with parameters as defined in sub case 8

Sub case 7: Counter sell far order fully traded

Against future near buy order will be generated. Go to sub case 8.

Sub case 8: Against future near buy order parameters

Order Quantity – traded quantity counter buy far order

Order Price – Order price of far order executed – Set difference

Sub case 9: Against future near buy order pending / partially traded if Market Order Upto is zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = zero

Modified pending against future near order price = Best ask price of far

After the set no. of modifications completed, the pending future near buy order price will be modified to zero (market order).

Sub case 10: Against future near buy order pending / partially traded if Market Order Upto is not zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = not zero

Modified pending against future near order price = Best ask price of far

After the set no. of modifications completed, the pending future near buy order price will be

((Pending future near buy order price) + (Market order upto value))

Sub case 11: Against future near buy order fully traded, if remaining quantity is zero

Stop quoting any fresh orders

Sub case 12: Against future near buy order fully traded, if remaining quantity is greater than zero

Go to Sub case 1.

Case III - Sell Near :: Buy Far with first order base option as Buy Far

Sub case 1: Conditions must be checked pre-submission of counter buy far future order if orders lot is 1

Remaining quantity – Should be greater than zero

Sub case 2: Conditions must be checked pre-submission of counter buy far future order if orders lot is more than 1

Remaining quantity – Should be greater than zero

Market Depth Upto – Availability of set order lots in near bid market depth

Sub case 3: Fresh counter buy far order parameters

Order Quantity – Set order lots considering the remaining quantity

Order Price – Current Future near expiry Best Bid minus difference set

Sub case 4: Counter buy far order pending with only single lot

Modified far expiry order price - Current Future near Best Bid minus difference set

Sub case 5: Counter buy far order pending with multiple lots (threshold quantity is not available on near side)

Market Depth Upto

Modify the pending buy far order as per sub case 2.

Sub case 6: Counter buy far order partially traded with multiple order lots

Order lot should be more than 1.

Cancel the pending buy far order and submit the against future near sell order with parameters as defined in sub case 8

Sub case 7: Counter buy far order fully traded

Against future near sell order will be generated. Go to sub case 8.

Sub case 8: Against future near sell order parameters

Order Quantity – traded quantity counter sell far order

Order Price – Order price of far order executed + Set difference

Sub case 9: Against future near sell order pending / partially traded if Market Order Upto is zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = zero

Modified pending against future near order price = Best bid price of near

After the set no. of modifications completed, the pending future near sell order price will be modified to zero (market order).

Sub case 10: Against future near sell order pending / partially traded if Market Order Upto is not zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = not zero

Modified pending against future near order price = Best bid price of near

After the set no. of modifications completed, the pending future near sell order price will be

((Pending future near sell order price) – (Market order upto value))

Sub case 11: Against future near sell order fully traded, if remaining quantity is zero

Stop quoting any fresh orders

Sub case 12: Against future near sell order fully traded, if remaining quantity is greater than zero

Go to Sub case 1.

Case IV - Sell Near :: Buy Far with first order base option as Sell Near

Sub case 1: Conditions must be checked pre-submission of counter sell near future order if orders lot is 1

Remaining quantity – Should be greater than zero

Sub case 2: Conditions must be checked pre-submission of counter sell near future order if orders lot is more than 1

Remaining quantity – Should be greater than zero

Market Depth Upto – Availability of set order lots in market depth on far ask

Sub case 3: Fresh counter sell near order parameters

Order Quantity – Set order lots considering the remaining quantity

Order Price – Current Future Far expiry Best Ask plus difference set

Sub case 4: Counter sell near order pending with only single lot

Modified near expiry order price - Current Future far Best Ask plus difference set

Sub case 5: Counter sell near order pending with multiple lots (threshold quantity is not available on far side)

Market Depth Upto

Modify the pending sell near order as per sub case 2.

Sub case 6: Counter sell near order partially traded with multiple order lots

Order lot should be more than 1.

Cancel the pending sell near order and submit the against future far buy order with parameters as defined in sub case 8

Sub case 7: Counter sell near order fully traded

Against future far buy order will be generated. Go to sub case 8.

Sub case 8: Against future far buy order parameters

Order Quantity – traded quantity counter buy far order

Order Price – Order price of near order executed – Set difference

Sub case 9: Against future far buy order pending / partially traded if Market Order Upto is zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = zero

Modified pending against future far order price = Best ask price of far

After the set no. of modifications completed, the pending future far buy order price will be modified to zero (market order).

Sub case 10: Against future far buy order pending / partially traded if Market Order Upto is not zero

Time interval

No. of Best Bid/Ask modifications

Market Order Upto = not zero

Modified pending against future far order price = Best ask price of far

After the set no. of modifications completed, the pending future far buy order price will be

((Pending future far buy order price) + (Market order upto value))

Sub case 11: Against future far buy order fully traded, if remaining quantity is zero

Stop quoting any fresh orders

Sub case 12: Against future far buy order fully traded, if remaining quantity is greater than zero

Go to Sub case 1.
