

COMPANY PROFILE

Transparency, speed and reliability are critical for success in today's trading environment. GreekSoft provides the analytical and trading solutions for making the best trading decisions with strong analytics, unmatched market access, powerful automated trading functionality, high performance cross-asset trading capabilities, ultra-low latency throughput and effective risk management.

Started in 1997 as a software consultancy firm, we are well recognized in the industry for our analytical and trading solutions in very short span of time. GreekSoft Technologies Pvt. Ltd. is an empanelled vendor on Indian stock and commodity exchanges. The most popular trading strategies include cash vs. future arbitrage, future vs. future arbitrage and volatility trading in options.

GreekSoft is perhaps the only company in India, which shaped the popular way of tapping the derivative market, by transforming customized cumbersome excel sheets into trouble-free technical tools for decision making, avoiding costlier rental based software products from international markets. The most popular analytical tools include Option Analysis, Tick by Tick.

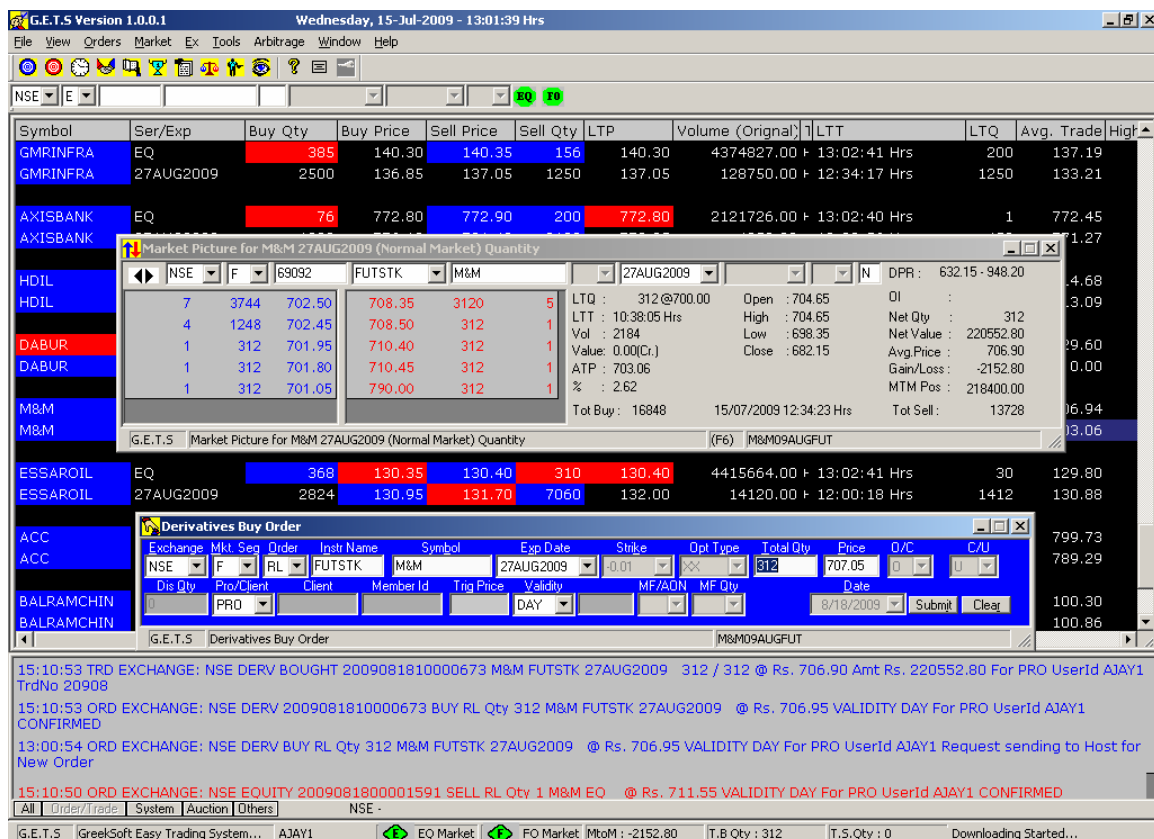

Extreme market moves have prompted rigorous assessment of risk, with many firms focused on the basic trading framework, trading risk sensitivities and scenario analysis. The trading firms increasingly rely on GreekSoft risk management tools to provide their trading risk insights on exchange traded derivative instruments.

GreekSoft Technologies Pvt. Ltd. is promoted by Mr. Ajit Hakani and Mr. Hitesh Hakani operates from Mumbai, India. We have a strong base of highly skilled, focused development, testing and support teams that works closely with customer towards making the best out of latest market technologies.

1. Trading Solutions

1.1 G.E.T.S. CTCL

GreekSoft CTCL trading platform is used by leading brokerage houses to conduct advanced trading, both proprietary trading and market making, for electronically-traded instruments. GreekSoft CTCL provides the competitive edge to trade from a single platform that can be used for trading and risk management in any listed instrument, across all asset classes, connected to multiple exchanges.

1.2 G.E.T.S. Automated Arbitrage

With today's markets moving at such a rapid pace, many traders rely on automated arbitrage models to capture microsecond market opportunities while reducing risk. GreekSoft algorithmic trading helps traders profit from short lived opportunities by

deploying and modifying strategy parameters as dictated by changing market conditions. Successful trading strategies are easily replicated and deployed from one market to another helping firms take advantage of the latest market opportunities. Advantages to firms those use automated trading

- Deploy latency sensitive strategies rapidly
- Trade faster and with more confidence
- Reduce costs by improving trader productivity
- Leverage an industry-standard programming language to develop strategies
- Deploy proven trading strategies quickly to new asset classes and markets
- Scale their business as trading opportunities grow

G.E.T.S. Cash to Future Arbitrage Quote

G.E.T.S. Cash to Future Arbitrage Quote model is for making fresh arbitrage (Buy Cash & Sell Future) and Unwind (Sell Cash & Buy Future) simultaneously across multiple derivative symbols listed on exchange within set conditions by standing in market according to the market conditions. The user has the advantage of defining the execution conditions mentioned below.

- Maximum lots per single order
- Counter and Against order selection
- Counter order generation conditions
- Against order generation conditions
- Order modify conditions in case of partial fill
- Optional server-based trading system for high performance

G.E.T.S. Future to Future Arbitrage Quote

G.E.T.S. Future to Future Arbitrage Quote model is for making Short Roll (Buy Near & Sell Far) and Long Roll (Sell Near & Buy Far) simultaneously across multiple derivative symbols listed on exchange within set conditions by standing in market according to the

market conditions. The user has the advantage of defining the execution conditions mentioned below.

- Maximum lots per single order
- Counter and Against order selection
- Counter order generation conditions
- Against order generation conditions
- Order modify conditions in case of partial fill
- Optional server-based trading system for high performance

G.E.T.S. Future to Future Arbitrage Opportunity

G.E.T.S. Future to Future Arbitrage Quote model is for making Short Roll (Buy Near & Sell Far) and Long Roll (Sell Near & Buy Far) simultaneously across multiple derivative symbols listed on exchange within set conditions by generating an opportunity based order, whenever the market opportunity meets the set criteria.

G.E.T.S. Volatility Trading

Market participant interest in volatility trading has never been greater. Traders are attempting to take advantage of differences in implied volatility and future forecasts for realized volatility of the option underlying and generate real returns.

GreekSoft volatility trading tools are increasingly being called on by these firms to increase profits and provide extensive real-time pricing & risk analytics, order validation & limits, multi-market liquidity access for trading exchange listed options (predominantly equity options) and hedging with cash and futures.

G.E.T.S. Order Slicing

Order slicing module is used for accumulation or reduction of shares based on the timer and market volume percentage across multiple markets from single screen. The user has

the advantage of segregating the quantity across multiple exchanges, defining the price for the slices.
