Sl.No.	Exch. pr.	Module Name	Test Case Name	Test Description with Steps	Expected Result	Actual Result	Result (Pass/Fail/NA)	No. of Test Cases	Pass %	Remarks
1A8	Manager	Before Backups are created	Verify Greenleaf db total count as per (USDIN) in GET Table	1. On Manager Open the GET Table (GET) 2. after open GET, get the total count with greenleaf db of following table: 2.1. TradeHistory=1 select count(*) greenleaf tradernumber from TradeHistory group by greenleaf tradernumber 2.2. OrderHistory=2 select count(*) greenleaf from OrderHistory group by greenleaf order by greenleaf 2.3. TradeHistory=2.3 select count(*) greenleaf tradernumber from TradeHistory group by greenleaf tradernumber 2.4. SequenceNumber=2.4 select count(*) from sequenceNumber 2.5. PendingOrder=selected count(*) greenleaf from PendingOrder group by greenleaf order by traderid 2.6. OrderHistory=selected count(*) greenleaf from OrderHistory group by greenleaf 2.7. get the multiple for traderid=2.7 select traderid from traderid 2.8. get the max traderid for traderid=2.8 select traderid from traderid	1. all total count record should be display for respective tables 2. All expected query data should be display in SQL Query browser window					
2A8	Manager	Verify the data in SQL with SQL (SELECT) greenleaf db (USDIN) (TTable)	1. Open the SQL Server Management Tools - Connect to the proper database. 2. after successfully connected the respective database then get the total record count of greenleaf tables 3.1. TradeHistory= select count(*) greenleaf tradernumber from TradeHistory group by greenleaf tradernumber order by greenleaf 3.2. OrderHistory=select count(*) greenleaf from OrderHistory group by greenleaf tradernumber order by greenleaf 3.3. TradeHistory=selected count(*) greenleaf tradernumber from TradeHistory group by greenleaf tradernumber order by greenleaf 3.4. NSESequence=Select count(*) from sequenceNumber 4. Note down the above information for reference	1. all total count record should be display for respective tables 2. All expected query data should be display in SQL Query browser window						
3A8	SQL	Delete data from SQL	1. use the following query to delete the SQL data 2. execute the following sql queries to the delete data from SQL 2.1. TradeHistory=2.1 delete from TradeHistory 2.2. OrderHistory=2.2 delete from OrderHistory 2.3. TradeHistory=2.3 delete from TradeHistory 2.4. NSESequence=2.4 delete from sequenceNumber	all mention data should be deleted from SQL						
4A8	Manager	Logout exchanges From Manager	1. Logout the all exchanges From Manager - Logout	all exchanges should be logout						
5A8	CTCL Client Communicator	Execute the backup data procedure from ClientCommunicator window	1. in this condition all Greenleaf db data gets restore into the SQL 2. after deleting above mention table data from SQL, GET (X) CTCL Client Communicator -> Utility -> Backup db after process is completed, message is display 3. after this process all greenleaf db data is restore into SQL	all greenleaf db data gets restore in this action all above mention data should be deleted from SQL Backup procedure completed. ... this message gets popups after backup done all greenleaf db data should be display into SQL
